2022-2026-CSE-A

Srinivasa Ramanujan Institute of Technology

Aim:

Write a program to sort (ascending order) the given elements using shell sort technique.

At the time of execution, the program should print the message on the console as:

```
Enter array size :
```

For example, if the user gives the input as:

```
Enter array size : 5
```

Next, the program should print the following message on the console as:

```
Enter 5 elements :
```

if the user gives the input as:

```
Enter 5 elements : 34 67 12 45 22
```

then the program should print the result as:

```
Before sorting the elements are : 34 67 12 45 22 After sorting the elements are : 12 22 34 45 67
```

Source Code:

ShellSort2.c

```
#include<stdio.h>
#include<conio.h>
void sort(int [],int );
void main()
   int a[20],i,n;
   printf("Enter array size : ");
   scanf("%d",&n);
   printf("Enter %d elements : ",n);
   for(i=0;i<n;i++)
   {
      scanf("%d", &a[i]);
   printf("Before sorting the elements are : ");
   for(i=0;i<n;i++)
   printf("%d ",a[i]);
   sort(a,n);
   printf("\n");
   printf("After sorting the elements are : ");
   for(i=0;i<n;i++)</pre>
   printf("%d ",a[i]);
   printf("\n");
void sort(int arr[],int n)
```

```
int gap,i,j,temp;
   for(gap=n/2;gap>0;gap=gap/2)
      for(i=gap;i<n;i++)</pre>
      temp=arr[i];
      for(j=i;j>=gap&&arr[j-gap]>temp;j=j-gap)
         arr[j]=arr[j-gap];
      }
      arr[j]=temp;
}
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Enter array size : 5
Enter 5 elements : 12 32 43 56 78
Before sorting the elements are : 12 32 43 56 78
After sorting the elements are : 12 32 43 56 78
